Story

Date	26 October 2026
Team ID	EN25CS3030037
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Story Point 1 - Global Medal Performance**: The data covers 910 country-Games records for 60 nations across 18 Games (1992-2026) and 8,000 athletes. The United States (735 medals), China (696) and Russia (429) lead the all-time table, and the top 5 nations win 43% of all 6,025 medals in it. Medals awarded per Games stay in a narrow band, from 305 in 2000 to 363 in 2020, and Biathlon (1.69), Shooting (1.66) and Cycling (1.62) give the most medals per athlete.
- **Story Point 2 - Regional Efficiency and Investment**: Average medal efficiency is 31.8%. South America (49.6%), Europe/Asia (46.0%) and Africa (42.8%) are the most efficient regions, while Europe and North America are about 27.5%. High-investment nations win far more medals per entry (18.7) than Low-investment nations (2.4), but are less efficient per athlete (17.2% vs 39.2%). Japan (691), China (683), the United States (668) and Italy (647) lead the host-country totals.

Activity 2:

Publish Story on Tableau Public and Paste Public link below
