Problem-Solution fit canvas 2.0

Give sports strategists, investment analysts and journalists one interactive view of Olympic medals, participation, regions and host countries, so they can make faster, data-driven decisions and tell clearer stories.

Define CS, fit into CC

1. CUSTOMER SEGMENT(S)

CS

Who is your customer? i.e. working parents of 0-5 y.o. kids

- National Olympic Committee performance strategists who choose which sports to support
- Sports investment analysts at international funding agencies
- Broadcast journalists and data storytellers at Olympic media networks

6. CUSTOMER CONSTRAINTS

CC

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

- Large data across 60 countries, 50 sports and 18 Games that is hard to combine
- Limited time and analyst capacity for manual analysis
- Need no-code, easy-to-read views with simple filters
- Must rely on common tools such as Excel and Tableau

5. AVAILABLE SOLUTIONS

AS

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

- Excel sheets and static medal tables: familiar, but manual and not interactive
- News sites and official medal tables: reliable, but fixed and hard to compare across Games
- Paid sports analytics reports: broad coverage, but costly and not customizable

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS

J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

- Find which sport categories give the most medals per athlete
- Compare countries and regions by total, Gold, Silver and Bronze medals
- Understand how medals changed over the years and how host nations performed
- Judge medal efficiency and sports investment against medals won by region

9. PROBLEM ROOT CAUSE

RC

What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations.

- Olympic data is large and spread across many Games, sports and countries
- Athlete, medal, Games and ranking data sit in four separate files, so like-for-like comparison is hard
- No single interactive view links participation, medals, regions and hosts
- Decisions end up resting on partial or outdated insight

7. BEHAVIOUR

BE

What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

- Directly: build manual Excel tables and pivots; compare medal tables across Games
- Search news and official sites for medal counts and benchmarks
- Indirectly: follow Olympic news and rankings to judge which countries and sports are rising
- Present findings to committees, funders and viewers

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS

TR

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.

- An upcoming Olympic cycle needs an investment decision
- A grant round or a documentary needs evidence

4. EMOTIONS: BEFORE / AFTER

EM

How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design.

- Before: overwhelmed, unsure, frustrated by scattered data
- After: confident, in control and ready to present clear evidence

10. YOUR SOLUTION

SL

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

- Interactive Tableau dashboard suite: Global Olympic Sports Performance Analysis
- Dashboard 1: KPI cards, world map, medal trend, medals per athlete by sport category, performance by country with a KPI selector
- Dashboard 2: regional KPIs, efficiency by region, investment vs medal performance, medals across hosts, medals by region and sport
- A Tableau story and a Flask website bring the views together

8. CHANNELS of BEHAVIOUR 8.1 ONLINE

CH

What kind of actions do customers take online? Extract online channels from #7

- Open the dashboards on the website or Tableau Public; use filters; read Olympic news and download datasets

8.2 OFFLINE

CH

What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.

- Review findings in committee and funding meetings; discuss with colleagues; use printed dashboard summaries

Extract online & offline CH of BE
